HOW TO USE TRANSAS CHART CORRECTIONS

INFORMATION

These files contain the latest corrections for Transas electronic charts data. The corrections are applicable only to the charts contained on CD-ROMs issued in 2006.

Transas chart corrections are shipped as self-extracting archives packed as a **single file** (*update.exe*) or divided into **several files** (*update01.exe, update02.exe, etc*) for easier download.

When run, the single archive file creates in the current directory a set of subdirectories named *DISK01, DISK02 and so on*, depending on the size of corrections data. So do the separate archive volumes, the only difference being that each volume creates only one subdirectory named respectively.

STEP 1

Transfer the contents of *DISK01 - DISKnn* directories onto floppies, making sure that only the files contained under directory name are copied and no '*DISKnn*' folders are created in the floppies' root directories.

STEP 2

Run setup.exe from the first installation diskette and follow the instructions on the screen
